Senior Product Designer with nine years designing data-dense enterprise systems where rules, roles, and edge cases carry real weight. I designed role-based permissions, governance, and dashboards for a federal platform serving 100,000+ users, defined a new financial management workspace with accounting stakeholders, and turned complex legislative rules into a voting workflow and dashboards for the U.S. House. I build the design systems, documented states, and specs that let engineering ship consistently, and I prototype in code (HTML, CSS, JavaScript, React). Available for full-time roles, and for fractional and contract work through Omoniyi Studio.

Career Highlights

- Designed permissions, user-management, and governance tools for the Enterprise Copyright System, serving 100,000+ users and application submissions.
- Designed data-dense dashboards for U.S. House committee vote data and for the Library of Congress copyright system.
- Defined the experience for a new financial management workspace at the Library of Congress through discovery with accounting stakeholders.

Professional Experience

Omoniyi Studio & LaunchKit UI | Founder & Designer | Aug 2026 — Present

Independent practice • Product design & front-end build

- Designed, built, and shipped omoniyialimi.com end-to-end: React front end, prerendered routes for search and link previews, accessible navigation, and GA4 funnel instrumentation.
- Scoped, designed, and built a client portal for Omoniyi Studio with Claude and ChatGPT, owning requirements, prioritization, and the client workflow end to end.

Aretum | UI/UX Designer | Mar 2024 — Jul 2026

Library of Congress • Enterprise Copyright System Modernization • Mar 2025 — Jul 2026

- Designed administration tools for role-based permissions, user management, and platform governance across a system processing 100,000+ users and submissions.
- Designed data-dense dashboards for the copyright system's operational data, and defined a new financial management workspace through discovery with accounting stakeholders.
- Led product discovery and UX research for the modernization of the Enterprise Copyright System, partnering with technical leadership and subject-matter experts across registration and financial operations.
- Mentored a designer on the search component, onboarding her into the design system's patterns and documentation as we designed it together.
- Expanded the platform design system with new components, design tokens, and documentation that set UI standards across the product.

U.S. House of Representatives • Enterprise Voting Modernization • Mar 2024 — Mar 2025

- Led end-to-end design of a new committee voting platform for the U.S. House, translating complex legislative processes into a clear digital workflow; designed for rollout to every committee, with two in pilot when I left.
- Designed data-dense dashboards for committee vote data.
- Built a USWDS-based design system of 30+ components with documented states, keyboard and focus behavior, tokens, and specs that became the foundation for future development.

Coretec | UI/UX Developer | Dec 2022 — Aug 2023

USDA National Agricultural Statistics Service • Enterprise System Modernization

- Led modernization of enterprise applications supporting agricultural data collection for 10,000+ farmers nationwide.
- Designed and built a shared design system in Figma, Blazor, HTML, CSS/SCSS, and USWDS, standardizing patterns across multiple applications.

Apex Systems | UI/UX Developer | Oct 2021 — Jan 2023

Athletico • Patient Onboarding & Scheduling Platform

- Built the redesigned patient onboarding and scheduling experience for a multi-location healthcare provider across desktop, tablet, and mobile, working in Figma with the design system lead.
- Shipped accessibility CSS fixes through GitHub pull requests and code review with engineering.

The Day Publishing | Front-End Designer & Developer | Dec 2018 — Oct 2021

- Designed and built responsive web products for 35+ organizations across healthcare, nonprofit, education, and commercial sectors, from discovery through launch.

Skills & Tools

Product: Product strategy, UX research, information architecture, interaction design, prototyping, dashboards, user stories & acceptance criteria

Systems: Design systems, component libraries, design tokens, Figma variables, USWDS, enterprise platforms, legacy modernization

Build & tools: Figma, FigJam, HTML, CSS, JavaScript, React, Blazor, Claude, ChatGPT, GitHub, Netlify, Azure DevOps

Accessibility: WCAG 2.1 AA, Section 508, keyboard & focus design, accessible forms, WAVE, Accessibility Insights, NVDA, JAWS

Education

Florida State University • Bachelor of Social Work, 2016
BloomTech • Software Development, 2018
