

Omoniyi Alimi

Senior Product Designer

I help people navigate complex systems.

www.omoniyialimi.com | contact@omoniyialimi.com

Over the past nine years, I've partnered with government agencies, healthcare organizations, and enterprise teams to modernize legacy systems and design digital products that make users' work easier. I start by asking thoughtful questions, listening closely, and analyzing the data. Then, I translate that complexity into products and experiences that feel more human while remaining clear, intuitive, accessible, and built to scale.

Career Highlights

- Led the end-to-end design of a new enterprise voting platform for all of Congress with the U.S. House of Representatives reducing input errors by 20% and decreasing document availability wait times by 18%.
- Built scalable enterprise design systems using USWDS across multiple government applications reducing development build times across teams.
- Modernized legacy government software supporting nationwide agricultural operations through scalable design systems, building 30+ components, and accessible enterprise experiences.
- Conducted 80+ hrs of UX research that informed the redesign of enterprise workflows across multiple stakeholder groups.
- Designed accessible products meeting WCAG 2.1 AA standards across highly regulated environments.

Professional Experience

Aretum | UI/UX Designer | Mar 2024 - Present

Library of Congress | Enterprise System Modernization | Mar 2025 - Present

- Led product discovery and UX research for the modernization of the Enterprise Copyright System, partnering with technical leadership and subject matter experts to redesign complex workflows across copyright registration and financial operations.
- Translated legacy business processes into intuitive user experiences through user interviews, journey mapping, user flows, wireframes, and interactive prototypes.
- Built and expanded the Enterprise Copyright System design system by creating new reusable components, design tokens, and documentation that established scalable UI standards across the platform.
- Designed enterprise administration tools supporting role-based permissions, user management, and platform governance across a system processing more than 100,000 users and application submissions.
- Partnered with accounting stakeholders to conduct discovery and define the user experience for a new financial management workspace within the Enterprise Copyright System.
- Wrote user stories and implementation-ready design specifications while partnering closely with engineering and QA to ensure successful product delivery.
- Designed accessible enterprise experiences for complex, form-heavy workflows using WCAG 2.1 AA standards and WAVE accessibility testing.

U.S. House of Representatives | Enterprise Voting Modernization | Mar 2024 - Mar 2025

- Led the end-to-end design of a new enterprise voting platform for all of Congress, transforming complex legislative processes into an intuitive digital experience.
- Partnered directly with House leadership and subject matter experts through recurring discovery sessions to define requirements, user flows, and product strategy.
- Built a scalable design system using USWDS, including 30+ reusable components, design tokens, and implementation-ready specifications that established the foundation for future product development.
- Developed interactive prototypes that accelerated stakeholder alignment and reduced ambiguity before engineering implementation.
- Wrote user stories and acceptance criteria to support Agile delivery and create a shared understanding between design, product, and engineering.

Coretec | UI/UX Developer | Dec 2022 - Aug 2023

USDA National Agricultural Statistics Service (NASS) | Enterprise System Modernization

- Led the modernization of enterprise applications supporting agricultural data collection for more than 10,000 farmers nationwide
- Designed and implemented a scalable enterprise design system using Figma, Blazor, HTML, CSS, SCSS, and the U.S. Web Design System (USWDS), establishing reusable components and standardized UI patterns across multiple applications.
- Partnered with product owners, engineers, and stakeholders to translate business requirements into intuitive user flows, prototypes, and implementation-ready designs.
- Established accessibility standards across multiple enterprise products using WAVE and Accessibility Insights, ensuring compliance with WCAG 2.1 AA requirements.
- Contributed to the modernization of legacy government applications by creating scalable templates that accelerated development and improved consistency across the product ecosystem.

Apex Systems | UI/UX Developer | Oct 2021 - Jan 2023

Athletico | Patient Onboarding & Appointment Scheduling Platform

- Redesigned patient onboarding and appointment scheduling workflows for a multi-location healthcare organization, improving the registration experience across desktop, tablet, and mobile platforms.
- Partnered with product managers, engineers, and fellow designers to create intuitive user flows, wireframes, prototypes, and production-ready interfaces aligned with the organization's design system.
- Facilitated user testing with more than 100 participants, incorporating research findings into iterative product improvements.
- Contributed to an estimated 8% increase in patient acquisition through improvements to the patient registration and scheduling experience.

The Day Publishing | Front-End Designer & Developer | Dec 2018 - Oct 2021

Digital Product & Web Experience Design

- Designed and developed digital experiences for more than 35 organizations across healthcare, nonprofit, education, and commercial industries, translating client goals into responsive web products.
- Facilitated discovery across multiple stakeholder groups with clients to define project requirements, user needs, and content strategy before translating insights into user-centered digital experiences.
- Designed responsive interfaces in Sketch and implemented production-ready websites using HTML, CSS, JavaScript, WordPress, and Bootstrap.

Birthright Africa | Graphic Designer | April 2021 - Oct 2021

Community Engagement & Digital Experience

- Designed digital marketing assets and user-centered web experiences supporting programs focused on African diaspora engagement and cultural education.
- Collaborated with cross-functional stakeholders to translate organizational goals into compelling digital communications and branded experiences.
- Maintained consistency across marketing materials and digital touchpoints through thoughtful visual systems and brand guidelines.

Education

Bachelors of Social Work | Florida State University | 2016

Skills

Product Strategy, UX Research, Interaction Design, Prototyping, User Flows, Accessibility, HTML, CSS, Javascript, AI, Cross-functional Collaboration, Agile Methodologies, User Story Writing, Design Reviews, Developer Hand-off

Tools

Figma & FigJam, Claude, OpenAI, React.js, Netlify, Framer, Azure DevOps, GitHub, WAVE, Accessibility Insights
